Tutorial: How to stake Sequence

Summary

This tutorial will help you start staking with the Sequence (SEQ) wallet.

Download the latest QT Client

1. Download the latest wallet located here:
<https://duality.solutions/sequence#downloads>

2. Allow your QT client to fully sync 100%.
3. Make sure you have sent Sequence into your wallet and the Sequence sent have received 101 confirmations
4. In the Sequence Core client, click on the Locked Wallet symbol:

Duality[®]

Blockchain
Solutions

5. Then another screen will pop up:

Unlock wallet

This operation needs your wallet passphrase to unlock the wallet.

Enter passphrase

Lock duration (sec)

Stake only mode ☐

6. Enter your passphrase, check mark stake only mode.
7. Click "OK".

That's it. On the bottom right hand side of your client you should see a staking notification (solid colored lightning symbol) which will indicate that your client is staking. Your QT client must remain open for your wallet to receive stakes. This means the wallet must be on a computer that runs 24/7.
